

## DTS integrates with TomTom Telematics, the leading fleet management solution for the towing industry.

Improve tow response time, increase contractor compliance and streamline departmental business processes. The integration of DTS's Law Enforcement Tow System (LETS) into TomTom WEBFLEET minimizes dispatcher effort in assigning and managing orders.

Calls can be directly dispatched to the TomTom PRO navigation device in the truck, which provides turn-by-turn navigation to both the call location and destination. A driver can update call information, such as

- Acknowledge Time
- Arrive Time
- Hooked Time
- Dropped Time
- Completed Time
- PO numbers

License Plate info and vehicle information such as "VIN" can be updated by a simple push of a button on the TomTom PRO.
